**VelQuest's SmartLab™ GMP Electronic Notebook System Selected
for Two Industry Awards**

VelQuest Corporation, Hopkinton, MA, January 11, 2006

VelQuest, the developer of a paperless compliance management system for development and quality control laboratory operations, announces the selection of the SmartLab GMP Electronic Notebook System for two industry awards for 2005.

SmartLab Version 3.0 GMP Electronic Notebook System was chosen as a 2005 "Breakthrough Product of the Year" by Processing Magazine. The award recognizes innovative new products introduced over the last year that have made or are expected to make a significant impact on the process industries. For more information, see www.processingmagazine.com and view the December 2005 issue.

VelQuest's SmartLab platform was chosen as a 2005 "Product of the Year" in the Laboratory Informatics–Data Management category by Scientific Computing magazine. The award process is comprised of tracking the level of reader response for the product over the last 12 months and input from their editorial board members. For more information, see the December issue of Scientific Computing (www.scimag.com).

"The VelQuest SmartLab GMP Electronic Notebook System is an innovative software platform solution to a fundamental GMP operation problem—pharmaceutical development and quality records are frequently paper-based with data documentation and review related activities consuming up to 70% of valuable human resource in laboratories", says Ken Rapp, President and CEO of VelQuest. "VelQuest's patented technology interacts with scientists in real-time and allows the electronic capture of data directly from devices such as balances and pH meters, and PC-controlled instruments (e.g., HPLCs), driven by SOPs and test methods."

"We are extremely pleased that two leading industry publications have selected our GMP Electronic Notebook System as an important new product in 2005," says Ken Rapp. "We believe that these two

recognition awards demonstrate the value of our technology to increasing productivity and compliance confidence in regulated laboratories.”

About VelQuest Corporation

The VelQuest SmartLab GMP Electronic Notebook System is an innovative software platform designed to provide the foundation for compliance-based activities in the life science markets. The core software embraces the FDA's "cGMPs for the 21st Century: A Risk Based Approach" initiative, and supports the company's SmartLab™ Applications for a fully compliant electronic laboratory, SmartShell™ 21 CFR Part 11 remediation software, and SmartBatch manufacturing batch record system.

Founded in January, 1999, VelQuest Corporation provides a growing suite of unique products to help transform regulated industries from labor-intensive, paper-based operations to automated, efficient systems, with greater confidence in their compliance than ever before possible.

VelQuest, SmartLab, SmartShell, and SmartBatch are trademarks of VelQuest Corporation.
